DESCRIPTORS Age Groups; Agriculture; *Comparative Statistics; Crime; *Demography; *Economic Disadvantagement; Educational Status Comparison; Females; Health; Housing; Income; Industrial Personnel; Labor Force; Migration; Occupations; *Population Trends; Racial Composition; Residential Patterns; *Tables (Data)
IDENTIFIERS *Kentucky

ABSTRACT

Providing information by counties, grouped according to Extension Areas and Area Development Districts, this data book is designed as an aid to identification of Kentucky problems. Included are definitions of terms, explanations of comparability of 1960 and 1970 figures, suggested uses, and exemplary uses. Tables provide 1960 and 1970 figures on: Population by Age Groups; Population by Residence; Number of Persons by Racial Groupings; Educational Status; Number of Employed Civilian Persons by Industry; Number of Workers by Type of Employer, Dependency Ratio, Percentage of Females in Labor Force, and Percentage of Total Working in County of Residence; Personal Income by Source; Number of Housing Units and Occupancy; Type and Age of Housing Units; Water, Sewage, Plumbing, and Kitchen Facilities in Housing Units; Appliances and Fuel Used in Housing Units; Selected Equipment and Financial Characteristics of Housing Units; and data on: Number of Families by Ratio to Poverty Threshold and Sources of Income for Families Below Poverty Threshold, 1970; Selected Health Indicators, 1950 to 1971; Crime Indices, 1970, 1971, and 1972; Persons per Household, Number of Crowded Units, 1960 and 1970, and Number of Units with Household Head 65 or Older, 1970; Characteristics of Farm Operators and Laborers, 1959 to 1970; and Population Change, Net Migration, 1950, 1960, and 1970, and Change of Residence, 1965 to 1970. PREFACE

The purpose of this publication is to make available information on the situation of Kentucky Counties. The collection is a selection of materials most often requested and considered to be of help to a wide range of workers. The information is provided by counties, and the counties are grouped according to Extension Areas and Area Development Districts.

In order to include as much data as possible, the tables have been kept simple, and a minimum amount of interpretation is provided. However, preceding each table is an introduction to the data contained in the table. Included are definitions of terms, explanations of comparability of 1960 and 1970 figures, suggested uses, and examples as to their use.

You may need information in addition to that included in this publication. The source of the data is indicated at the end of each table (e.g., United States Census of Population), and, possibly, what you want is in the original source. If the information you need is not available, you may wish to do a survey in your county or community.

Problem solving is dependent upon the detection of the problem, the determination of its seriousness, and the planning of ways to solve it. The emphasis is usually on the action phase; however, before action can take place there must be a realization that the problem exists, and there must be an understanding of the nature and extent of the problem. This collection of information can help in identifying and understanding problems.

In addition to the short introduction to each table, the following questions may also be helpful in guiding your interpretation:

p. 3-6 blank

1. What does the information mean for my program?
2. How does the county compare with other counties, the State of Kentucky, the nation, or with other standards.
3. How does the 1970 figure compare with 1960?
4. What conditions caused the present situation?
5. What will likely be the consequences?
6. What is the present trend?
7. What local conditions must be understood for intrepretation of the data (e.g., a military installation or a regional hospital located in the county)?
8. What additional information is necessary?

The Kentucky Cooperative Extension Service and the Agricultural Experiment Station periodically publishe reports interpreting various aspects of population characteristics. To obtain such reports, and to get help in securing more information and in interpreting data given in this report, write to the Department of Sociology, University of Kentucky, Lexington.

TABLE 1. POPULATION CHANGE, NET MIGRATION, 1950, 1960, 1970 AND CHANGE OF RESIDENCE, 1965 TO 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 1 includes the 1970 population by counties, the percent change from 1950 to 1960 and from 1960 to 1970, the natural increase and net migration for the sixties and seventies, and the 1965 place of residence.

The change in total population is accounted for in births and deaths and in people moving in and out of a county or area. Natural increase is the number of births minus the number of deaths and is found in the records of vital statistics. Net migration is the difference between the number of persons moving in and the number moving out (net migration equals immigration minus outmigration) and is collected by the United States Bureau of the Census.

The data on residence of persons in 1965 was compared with residence in 1970 to determine the extent of residential mobility of the population. Those persons who indicated that they live in the same house did not move in the period from 1965 to 1970. Those persons who had changed residence were classified according to type of move--within the same county, from another county in the same state, from a different state, or from another country. Data, with respect to residence, are all in percentages.

Some questions answered through use of data in this table are: What is the total population of the county? How much change has there been in the sixties and seventies? How much of an increase has there been from births minus deaths? How much of the change in population is due to migration? Is the county gaining or losing people due to migration? What portion of the people moved and did not move in the five-year period from 1965 to 1970? Did those persons who changed residence from 1965 to 1970 come from abroad, from another state, another county in the state; or stay in the same county?

EXAMPLES OF INTERPRETATION

Anderson County

1. The county lost population due to migration from 1950 to 1960, but gained from 1960 to 1970.

2. Forty-one percent of the population changed their residence from 1965 to 1970.

3. Of the 1970 population, twenty-three percent of the population moved within the same county.

4. Eleven percent moved from another county but stayed in Kentucky.

5. Three percent moved outside of Kentucky.

TABLE 2. POPULATION BY RESIDENCE, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 2 indicates the population in 1960 and 1970 by their place of residence. The three categories are urban, rural nonfarm, and rural farm. The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. The population not classified as urban constitutes the rural population. The rural population is, in turn, subdivided into the rural-nonfarm and rural-farm portions. The rural-farm population consists of persons living on places of 10 or more acres from which sales of farm products amounted to $50.00 or more in the preceding calendar year or on places of less than 10 acres from which sales of farm products amounted to $250.00 or more in the preceding year. Persons in rural areas (not urban) who do not meet the definition of the rural-farm population are classified as rural-nonfarm residents.

Certain counties have a high proportion of their total population in institutions, colleges, military posts, and other large group quarters. Group quarters are defined as institutions or separate living quarters occupied by six or more unrelated persons.

Information on place of residence gives an indication as to whether a large portion of the population is classified as urban or rural, rural farm or nonfarm. This information is important in determining clientele needs. Likewise, data on the number of persons residing in group quarters gives an indication of the presence of large institutions and joint living arrangements. The presence of a college, military installation, or other institutions may cause total county information on age, race, and sex to be misleading.

EXAMPLES OF INTERPRETATION

Madison County:

1. In 1970, 56% of the population was urban as compared with 49% in 1960.

2. In 1970 the rural-farm population comprised 13% of the total population compared with 23% in 1960.

3. The rural-nonfarm population increased from 27% in 1960 to 31% in 1970.

4. The number of persons in group quarters increased from 2,567 in 1960 to 6,356 in 1970.

TABLE 3. NUMBER OF PERSONS BY RACIAL GROUPINGS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

The concept of race as used in Table 3 does not denote clear-cut scientific definitions of biological stock, but rather it reflects self-identification by respondents. The data represent self-classification of people according to the race with which they identify themselves. For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was generally used.

The category "Negro" includes persons who indicated their race as Negro or Black. The category "Other Races" includes American Indian, as well as any persons who did not classify themselves in one of the specific race categories.

The data on mother tongue relates to the language spoken in the person's home when he was a child. Information on mother tongue is used to assist in the identification of the various ethnic groups in the population. The data on "Spanish Mother Tongue" help to identify large concentrations of persons where English may not be the major language. However, the data on mother tongue may not reflect a person's current language skills since the vast majority of persons reporting a mother language other than English have learned to speak English during or after their childhood.

The information in the table provides answers to questions concerning the racial makeup of the population. How many Blacks are there in the county? What percentage is this of the total population? What percentage are white? Is there a large group of other races represented in the county? Is there a large group of Spanish-speaking persons in the county?

EXAMPLES OF INTERPRETATION

Jefferson County

1. In 1970, 16% of the population was Black. This is up from 13% in 1960.

2. Other races represented less than 1% of the population.

3. The white population represented 86% of the total county population in 1970 and 87% in 1960.

4. In 1970, 2,106 persons or less than 1% reported Spanish as being their mother tongue.

TABLE 4. POPULATION BY AGE GROUPS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 4 provides a breakdown of the population of each county by age groupings. The categories used are: under six years of age, from age 6 to 17, from 18 to 64, and those 65 and over. In addition, the number of persons from ages 9 to 19 is given as an indication of the potential number of 4-H members. The figures are the number of persons in each category. Also listed is a median age for the total population.

The age classification is based on the age of the person in completed years as of April 1, 1970. Ages were calculated based on date-of-birth information supplied. A breakdown by each individual year is available in the source listed.

The categories provide an indication of the number of pre-school children, those of school age, those in the productive years, and the number of elderly. The median age helps to indicate whether there exists a younger or older population in comparison with other counties, the state, and the nation. It is possible to calculate what percentage of the population falls in each category and to compare the 1960 and 1970 figures.

Information on age helps us to determine the needs of specific clientele groups. It may indicate the necessity for day care facilities, educational programs, increased job opportunities, or services for the elderly.

EXAMPLES OF INTERPRETATION

Floyd County

1. In 1960, 14% of the population was under 6 years of age.
2. In 1970, the percentage under 6 years of age had declined to 11%.
3. In 1960, 6% of the population was 65 and over.
4. In 1970, the percentage 65 and over had increased to 10%.
5. In 1960, 32% of the population was 6-17 years old.
6. In 1970, the percentage of ages 6-17 had declined to 26%.

TABLE 5. EDUCATIONAL STATUS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

The data on education are taken from the Bureau of Census, Armed Forces Qualifying Tests, the Kentucky Department of Education, and the National Merit Scholarship Program. The first two columns in the table indicate the percentage of persons 16 and 17 years old who were enrolled in school at the time of enumeration in 1960 and 1970. The median number of school years completed is defined as the value which divides the population into two equal parts--one-half having completed more schooling and one-half having completed less schooling than the median. The figure is the number of years completed in a public or private school or college by those persons 25 years old and older. The "percentage of school graduates of ninth grade enrollments" is determined by dividing the number of high school graduates by the number of students enrolled in the ninth grade in 1970 and 1960. The next six columns in Table 5 indicate the percentage of high school graduates who went on to college, to trade school, or took a job. "Percentage Qualified AFQT" refers to the percentage of young men passing the Armed Forces Qualifying Tests for the three-year period from 1968 to 1970. The number of high school graduates includes all graduates from public and private high schools in the counties for the years 1970 and 1964. The last columns indicate the actual number of merit scholarship semi-finalists for each county for the periods from 1965 to 1973 and 1956 to 1964.

The data in this table deal with the educational achievement level of the population. Most refer to formal school enrollment; however, the Armed Forces Qualifying Tests and the number of merit scholarship semi-finalists indicate general performance levels. In addition, there is a breakdown of where high school graduates go after graduation. There is information in the table concerning school drop-out rates, median level of education of the population, what percentage failed the Armed Forces Qualifying Tests, how many graduates are going on to college and how our students achieve in comparison with other counties, the state and nation.

EXAMPLES OF INTERPRETATION

Taylor County

1. The percent of 16 and 17 year olds enrolled in school rose from 67% in 1960 to 81% in 1970.

2. The median educational level increased from 8.4 years in 1960 to 8.9 years in 1970.

3. In 1970, 39% of the graduates went on to college, 7% attended trade school, and 38% got a job.

4. In 1960, 44% went on to college, 6% went to trade school, and 22 went to work.

5. Twelve percent of those examined failed to pass the Armed Forces Qualifying Tests.

6. There were 207 high school graduates in 1964 and 237 in 1971.

TABLE 6. NUMBER OF EMPLOYED CIVILIAN PERSONS BY INDUSTRY, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 6 indicates the total number of persons employed with a breakdown of workers by the type of industry in which they are employed. Data are for civilian workers only. The industries are classified into 11 major industry groups. Most of the groups are evident from their name; however, some examples of each are the following:

Agriculture--farming, forestry, fisheries
Mining--mining, quarrying, petroleum and gas extraction
Construction--wood, metal, machinery, electrical, vehicles, foods, textiles, chemicals
Transportation, Communication, Utilities--railroads, trucking, telephone, radio, gas, electricity, water
Trade--wholesaling, retailing
Personal Service--household workers, barbers, hotels, dressmaking, shoe repair shops
Health Services--hospitals, physicians, nurses, pharmacists, dentists
Education--elementary, secondary, colleges, libraries, museums
Public Administration--postal services, Federal, State and local officials
All Other--those that do not fall in any of the above categories.

Questions concerning the number of workers in any one industry, how it has changed from 1960 to 1970, and the percentage it represents of the total work force can be answered from information in this table.

EXAMPLES OF INTERPRETATION

Perry County

1. The total number of workers declined from 6,821 in 1960 to 5,805 in 1970. This represents a 15% decline.

2. The number of Agricultural workers increased from 140 to 162 from 1960 to 1970.

3. The number of persons employed in mining declined from 2,177 to 1,157 from 1960 to 1970. This is a decrease of 47%. The mining industry employed 32% of the workers in the county in 1960 but only 20% in 1970.

4. The number of construction workers increased from 304 to 359 from 1960 to 1970.

0032

5. The ten-year period from 1960 to 1970 saw a decline in the number of manufacturing employees from 328 to 218.

6. Transportation, communication and utilities; trade; and health services remained relatively constant in the number of workers in these industries.

7. The industries of personal services, education, and public administration registered increases in the number of persons employed from 1960 to 1970.

8. Forty-two percent of the workers in the county were employed in either mining or trade in 1970.

0033

TABLE 7. NUMBER OF WORKERS BY TYPE OF EMPLOYER, DEPENDENCY RATIOS, PERCENTAGE OF FEMALES IN LABOR FORCE AND PERCENTAGE OF TOTAL WORKING IN COUNTY OF RESIDENCE, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 7 indicates the number of workers by type of employer, a ratio of the number of workers to nonworkers, the percentage of females in the labor force, and the percentage of persons working in their county of residence.

Workers are divided into four categories: self-employed, private wage workers, armed forces, and government employment. Those that are self-employed are further subdivided into those working in agricultural and non-agricultural occupations.

A self-employed worker is one who works for the business he owns. Private wage workers are persons who work for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rate. Employees of the armed forces include those military workers located in the county. Government employment includes persons working for any government unit- federal, state, or local.

The ratio of non-workers per 100 workers is often referred to as the dependency ratio. It is a ratio of all persons not in the labor force, including persons under 14 years of age, to the number of persons in the labor force.

"Females in the labor force" refers to the percentage of all females, 16 years old and over, that are in the working force.

The last columns of the table list the percentage of persons in the labor force that work in the same county in which they reside.

The information on workers by type of employer gives answers to such questions as: How many self-employed persons in agriculture and business do we have in the county? What portion of the workers are wage workers? What portion are employed by the armed forces? How many work for the government?

What is the dependency ratio in the county? In other words, how many non-workers do the workers have to support? The non-workers include such persons as children, the aged, the unemployed, and the unemployable.

What portion of the women work? What portion of the workers work in their county of residence and what portion commutes to another county?

The occupational status of the population has implications for programs. Are clients self-employed or wage workers? Is the rate of unemployment high? Are there day-care facilities for female workers? Are there employment opportunities within the county?

0042

EXAMPLES OF INTERPRETATION

Hardin County

1. The number of self-employed agricultural workers declined from 1,221 in 1960 to 597 in 1970.

2. Armed forces workers represented 62% of the total labor force in the county in 1970.

3. The dependency ratio of 85 in 1970 was extremely low because of the Fort Knox Military Reservation.

4. Thirty-five percent of the women worked in 1970.

5. Sixty-seven percent of the workers reside and work in the county (33 percent commute to another county.)

TABLE 8. CHARACTERISTICS OF FARM OPERATORS AND LABORERS, 1959 TO 1970, KENTUCKY COUNTIES

INTRODUCTION

The term "farm operator" is used to designate a person who operates a farm, either doing the work himself or directly supervising the work. A farm is defined as a place of 10 or more acres from which sales of farm products amounted to $50.00 or more annually, or a place of less than 10 acres from which sales of farm products amounted to $250.00 or more in the preceding year. The farm operator may be the owner, a part owner, a member of the owner's household, a salaried manager, or a tenant, renter, or sharecropper. Owner operators operate land they either fully or partially own, whereas tenant operators operate land they rent from others, or work on shares for other. Farm laborers work for a farm operator for wages, salary, commission, or pay-in-kind. "Female operators" represent the number of farm operators that are of the female sex. Not all farm operators are full-time farmers; therefore, Table 8 indicates the percent of operators working at off-farm employment 100 days or more per year. Non-resident operators are those persons living someplace other than on the farm they are operating. Non-resident operators are listed for 1960 and 1970 from the population census and for 1959 and 1969 from the agricultural census. In many cases these two figures are quite different. The data of non-resident farm operators from the population census were obtained by subtracting the number of operators that reported living on the farm from the total number of farm operators. The agricultural census figure is the number of farm operators that indicated they were not residing on the farm they operated. The discrepancy between the two figures can be explained, at least partially, by the differences in self-reporting of the respondents and fairly high percentage of non-responses in the agricultural census (14 percent for the state, with some counties running much higher rates). Also included in the table are the median age and median number of years of schooling of farm operators.

Data concerning farm operators in 1969 and 1964 were taken from the agricultural census and information from 1970 and 1960 was from the general population census.

The table gives us information for any one county concerning the number of farm operators and laborers. It also details some characteristics of the operators--owner or tenant, male or female, those working a considerable amount off the farm, resident or non-resident, median age, and median educational level.

EXAMPLES OF INTERPRETATION

Grant County

1. The number of farm operators declined from 1,244 in 1960 to 1,113 in 1970.

2. In 1970, 90% of the operators were owner operators.

0048

3. The number of tenant operators from 1960 to 1970 declined from 222 to 144.

4. The number of farm laborers decreased from 214 in 1960 to 72 in 1970.

5. The percentage of part-time farm operators (working off the farm 100 or more days) increased from 24% to 49% from 1959 to 1969.

6. The number of non-resident farmers increased from 89 in 1959 to 289 in 1969.

7. The median age increased from 51.7 to 52.3 years from 1959 to 1969.

8. The median level of education of farm operators in 1964 was 8.7 years.

0049

TABLE 8: CHARACTERISTICS OF FARM OPERATORS AND LABORERS, 1959 TO 1970, KENTUCKY COUNTIES

County	Number of Farm Operators		Owner Operators		Tenant Operators		Farm Laborers		Female Operators		Percent of Operators Working Off Farm, 100+Days		Non-Resident Operators		Non-Resident Operators		Median Age of Operators		Median Grade in School

TABLE 9. PERSONAL INCOME BY SOURCE, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 9 provides information on sources of personal income for residents of the county. The four categories of sources used are: wages, proprietors, property, and transfer payments. Wages are those payments received for labor or services performed. Proprietors are the owners and operators of a business. The category "property" refers to income received from personal and real estate property. This includes income from the sale or lease of real estate and interest and dividends on investments. Transfer payments are public expenditures made for a purpose other than procuring goods or services--such as social security, unemployment compensation, veteran's benefits and public assistance. Proprietorships are also subdivided into farm and nonfarm sources. "Government initiated" payments refer to that portion of total personal income received that originated from federal, state, or local levels of government. The median family income includes the income from all sources of all family members fourteen years old and older.

Information from the table can give answers to such questions as: What portion of the total personal income of the county is derived from wages, property transactions, transfer payments, and proprietorships? What portion of personal incomes of proprietorships is from farm and nonfarm sources? What is the total personal income for the county? What portion comes from government sources? What is the median family income for the county?

EXAMPLES OF INTERPRETATION

Mason County

1. Total personal income in the county rose from 32.1 to 55.4 million dollars from 1960 to 1970, an increase of 73% over the ten year period.

2. Sixty-four percent of personal income in 1970 was derived from wages.

3. Farm proprietors accounted for 10% of total personal income for the county.

4. Median family income in 1970 was $7,140, up 186% from 1960.

TABLE 10. NUMBER OF FAMILIES BY RATIO TO POVERTY THRESHOLD AND SOURCES OF INCOME FOR FAMILIES BELOW POVERTY THRESHOLD, 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 10 deals with the data on poverty. The poverty statistics are based on a definition that is principally dependent upon family income level. The index, however, is on a sliding scale that is adjusted by such factors as family size, sex of the family head, number of children under 18 years of age, and farm and nonfarm residence. With these adjustment factors the poverty level ranged from $1,487 for a female unrelated individual 65 years old or over living on a farm to $6,116 for a nonfarm family with a male head and with seven or more persons in the family. The average poverty threshold level for a nonfarm family of four headed by a male was $3,745. Except for farm and nonfarm differences, the poverty thresholds have not been adjusted for regional, state or other local variations in the cost of living.

The following list gives an idea of what the definition of poverty was in 1970 for different situations (the sex of the family head and the number of children under 18 years of age are not considered).

	Nonfarm		Farm	
	Male Head	Female	Male Head	Female
Unrelated Individual				
Under 65 years	$1,974	$1,826	$1,678	$1,552
65 + years	1,773	1,751	1,508	1,487
Families				
2 persons				
Head under 65 years	2,473	2,373	2,100	1,984
Head 65 + years	2,217	2,202	1,883	1,861
3 persons	2,937	2,830	2,485	2,395
4 persons	3,745	3,725	3,197	3,159
5 persons	4,418	4,437	3,770	3,761
6 persons	4,962	4,917	4,425	4,205
7 + persons	6,116	5,952	5,185	5,129

The income reported by each family was divided by the corresponding poverty threshold figure that applied, depending upon the sex and age of the head of the household, residence, the number of children under 18, and size of family. The resulting figure is a ratio of family income to poverty threshold.

If the poverty threshold of a nonfarm family of four headed by a male was $3,745 and the family income was $7,490, then the ratio would be 2.0, or twice what the poverty level was. If the income was $2,000, the ratio would be .53, or in other words, the family had an income of about one-half of what was considered to be the poverty level.

0059

Poverty in the 1960 Census was set at $3,000 per family with no consideration for the variables--family size, residence, age and sex of family head--used in 1970. The 1970 figure should be much more meaningful.

Following the ratio of income to poverty threshold is an indication of the source of income of poverty families and the actual number of families that are below the poverty level. The source of income of poverty level families helps explain whether these families are wage earners, are elderly and on social security, or are receiving public assistance. Poverty families may report more than one source of income; thus the number of families under source of income may be greater than the total number of poverty families reported in the last column of the table.

From this table one can determine the percentage of families in each category (under .50; .50 to .74; .75 to .99; 1.00 to 1.24; 1.25 to 1.49; 1.50 to 1.99; 2.00 to 2.99; and 3.00 and over). Therefore, in addition to the number of families above and below the poverty threshold, the table gives an indication of the distribution of the families from the low to high categories.

EXAMPLES OF INTERPRETATION

Knott County

1. Twenty-three percent of the total number of families are under 50% of the poverty level.

2. Eleven percent of the total number of families are over three times (300%) the poverty threshold.

3. Fifty-six percent of the total number of families are below the poverty threshold.

0060

TABLE 11. SELECTED HEALTH INDICATORS, 1950 TO 1971, KENTUCKY COUNTIES

INTRODUCTION

Table 11 contains a number of indicators of overall health conditions in the counties. The first, "infant mortality per 1,000 births", is the number of deaths under one year of age per 1,000 live births occurring during the three year period indicated. Maternal deaths refer to deaths of mothers due to complications of pregnancy or childbirth. Listed is both the number of deaths in two ten-year periods and the rate per 100,000 births. Another indicator of the condition of health of the population is the percent of rejections in the Selective Service physical exam.

A common procedure for indirectly assessing health care is to determine the availability of health services and facilities. Those listed in this table are hospital beds, doctors, dentists, and registered nurses. Both the actual number and the rate per 100,000 population is given for each.

In spite of the fact that the death rate in the state has declined over time, this reduction has not affected all segments of the population equally. Some areas of the state are still well above the rate for the state as a whole. The Selective Service physical exam is one indicator that allows for the comparisons among counties and states. It is uniformly administered across the nation. The number of professionals and facilities available is a secondary indicator that gives some indication of health care; however, it can be misleading. Quantity of resources does not necessarily indicate quality of service. The mere presence of hospitals and professionals in a county does not insure their use. Nor does the indicator take into consideration problems of accessibility. Rates are influenced by regional facilities and medical schools and thus may not realistically reflect the status of health care. However, given these shortcomings, the information still can be very revealing concerning health care in the state.

EXAMPLES OF INTERPRETATION

Bath County

1. The infant mortality rate declined from 52 deaths per 100,000 births from 1958 to 1960 to 26 per 100,000 from 1968 to 1970.

2. The maternal death rate from 1956 to 1969 was 75 per 100,000 births compared with 52 per 100,000 for the state.

3. The rejection rate for Selective Service exams was below that of the nation.

4. There were no hospitals, four doctors, one dentist and eight

0065

registered nurses in the county in 1970.

5. The ratio of number of doctors per 100,000 population was 43, compared with 99 for Kentucky and 171 for the nation.

TABLE 12. CRIME INDICES, 1970, 1971, AND 1972, KENTUCKY COUNTIES

INTRODUCTION

Table 12 lists crime indices by specific offences. The categories--murder, rape, robbery, aggravated assault, burglary, larceny, and auto theft--are listed according to their rate of occurrence per 100,000 population per year. Definitions of the categories are the following:

Murder--The unlawful killing of a human being with malice aforethought.
Rape--The carnal knowledge of a female forcibly against her will.
Robbery--The felonious and forcible taking of the property of another, against his will, by violence or by putting him in fear.
Aggravated Assault--An assault is an attempt or offer, with unlawful force or violence, to do physical injury to another.
Burglary--The unlawful entry or attempted entry of any structure to commit a felony or larceny.
Larceny--The unlawful taking of the property of another with intent to deprive him of ownership.
Auto Theft--The larceny or attempted larceny of a motor vehicle.

Furthermore, in Table 12, crimes are divided into those performed against persons and those against property. The actual number of such crimes are listed for the years 1970, 1971, and 1972, followed by the crime rate against persons and property per 100,000 population for 1972.

The crime rates for each county can be compared with other counties, the state and the nation. Likewise, an indication of changes over time can be seen by comparing the data for three years.

EXAMPLES OF INTERPRETATION

Laurel County

1. The offences of murder, rape, and aggravated assault showed a higher rate of incidence in the county than in the state; however, the offences of robbery, burglary, larceny, and auto theft registered much lower rates in the county than in the state as a whole.

2. From 1970 to 1973 there was an increase in crimes against persons, while the number of crimes against property remained relatively constant.

0071

3. The rate of crimes against persons was slightly below the state level in 1972.

4. The rate of crimes against property was substantially below that of the state and nation in 1972.

0072

TABLE 13. NUMBER OF HOUSING UNITS AND OCCUPANCY, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as living quarters. Year-round housing units include all occupied units plus vacant units which are intended for year-round use. Seasonal units refer to vacation homes, units held for migratory labor, and any others intended for seasonal occupancy. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. All other occupied units are classified as "renter occupied", including units rented for cash rent and those occupied without payment of cash rent. A unit is considered vacant if no one was living in it at the time of enumeration, unless its occupants were only temporarily absent. Vacant housing units include those unoccupied year-round units that are available for rent or sale, are awaiting occupancy, or for other reasons are uninhabited.

The total number of housing units is broken down in the table into seasonal and year-round units. The year-round units are further subdivided into those that are vacant and those that are occupied. Occupied year-round units are, in turn, classified as owner or renter occupied.

From the raw data provided, percentages can then be calculated. For example, one can answer such questions as: What percentage of the total housing units are seasonal units, year-round units? What percentage of year-round units are occupied, vacant? What percentage of the occupied year-round units are owner and renter occupied? Trends can be seen by comparing 1960 and 1970 data.

EXAMPLES OF INTERPRETATION

Calloway County

1. Ninety-eight percent of the total housing units are year-round.
2. Ninety-four percent of the year-round units are occupied.
3. Sixty-nine percent of occupied units are owner occupied.
4. Thirty-one percent of occupied units are renter occupied.

TABLE 14. TYPE AND AGE OF HOUSING UNITS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

The type of housing unit is indicated as a single family unit, a multi-unit structure, or a mobile home. A single family unit is a structure containing a single unit, excluding mobile homes. A multi-unit structure contains two or more units in the same building. Mobile homes are treated as a separate category. The age of the housing unit is an indication of the year the structure was built. The age is divided into categories of from 0-5, 6-10, 11-20, 21-30, and 31 years and over.

The table lists the actual number of housing units in any category; however, the 1960 and 1970 figures for type and age are not exactly comparable. In 1960 census information for type and age was gathered for all housing units, but in 1970 the information was collected on only year-round units (excluding seasonal units). Therefore, in figuring percentages for 1960 data all housing units should be used as the total and for 1970, total year-round units should be used. Both figures can be found in Table 13.

Examples of some questions that can be answered through using data in the following table are such things as: How many single family units, multi-unit structures, and mobile homes are in the county? What portion (percentage) are of each type? How many homes have been built in the past five years, more than 30 years ago? What percentage are in each age category? What changes have taken place in the type and age of housing units from 1960 to 1970? How does the county compare with other counties, the state and nation?

The type and age of housing are important in assessing such things as total housing needs, the rate of growth and expansion, the availability of specific types of housing, and the need for comprehensive planning.

EXAMPLES OF INTERPRETATION

Fulton County

1. In 1970, 82 percent of the year-round housing units were single family units.

2. In 1960, 88 percent of all housing units were single family units.

3. Nine percent of the year-round units had been built from 1965 to 1970 and 63 percent were more than 30 years old.

TABLE 15. WATER, SEWAGE, PLUMBING, AND KITCHEN FACILITIES IN HOUSING UNITS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 15 lists the source of water for the home as: community (public system or private company), individual well, or other source (springs, creeks, rivers). Sewage disposal is also divided into the three categories of community (public system or private company), individual (septic tank or cesspool), or other. A housing unit with complete plumbing has both hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. A unit has complete kitchen facilities when it has all three of the following: (1) an installed sink with piped water, (2) a range or cook stove, and (3) a mechanical refrigerator. All three must be for the exclusive use of the occupants and located in the structure.

The data indicate the number of housing units utilizing community and individual water and sewage systems. This is very important information when planning for new sewage and water systems. The table also gives an indication of the number of homes that have complete plumbing and kitchens. Information in 1960 was collected on the total number of housing units, whereas in 1970 information on water and sewage systems, plumbing, and kitchen facilities was reported on only year-round housing units. Therefore, care should be exercized in comparing the figures for the two years and in calculating percentages. The base figure in 1960 should be total housing units, and in 1970 total year-round units.

Information on the source of water and sewage disposal system was not collected in 1960 in urban places of 50,00 or more. Hence, the the data for Fayette, Jefferson, and Kenton counties are incomplete.

EXAMPLES OF INTERPRETATION

Caldwell County

1. Sixty percent of the year-round housing units were on a community water source in 1970.

2. Forty-three percent of the year-round housing units were on a community sewage system in 1970.

3. Seventy-three percent of the year-round housing units had complete plumbing in 1970.

4. Forty-nine percent of the total housing units had complete plumbing in 1960.

TABLE 16. PERSONS PER HOUSEHOLD, NUMBER OF CROWDED UNITS, AND NUMBER OF UNITS WITH HOUSEHOLD HEAD 65 OR OLDER, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Persons per household refers to all persons occupying the housing unit. These persons include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, or resident employees who share the living quarters of the housing unit. Persons per room is computed for each occupied unit by dividing the number of persons in the unit by the number of rooms in the unit. Table 16 reports those units with more than one person per room. Anything greater than one person per room is commonly thought of as being crowded conditions. Also reported is the number of heads of household that are age 65 or over.

The number of persons per household is indicated by categories and then a mean figure is given. This information shows the number of one and two member households, generally represented by singles and couples without children in the home; those with three to five members, representing most families; and those larger families with six or more members. The figure of the number of persons per room relates the number of persons occupying the residence to the size of the housing unit. Of most interest is the number of units in which there exist crowded conditions. By knowing how many heads of household there are 65 years and older, one has some idea of the need for programs such as housing, medical care, transportation and recreation for the elderly. It may also indicate their limited interest and ability to support community services.

All data in this table are based on the total number of occupied housing units as listed on Table 13.

EXAMPLES OF INTERPRETATION

Daviess County

1. Fifteen percent of all occupied housing units in 1970 were single member households.

2. Twelve percent of all occupied housing units had six or more persons per household in 1970.

3. Seventeen percent of all occupied housing units had more than one person per room in 1960.

4. Eighteen percent of all occupied housing units had a head of household of 65 years or older in 1970.

TABLE 17. APPLIANCES AND FUEL USED IN HOUSING UNITS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 17 indicates appliances available and fuel used in the housing unit. The appliances are a clothes washing machine, a clothes dryer, a food freezer, and a dish washer. Fuels for automatic controls for cooking and heating refer to utility gas, electricity, bottled, tank, or LP gas, and fuel oil or kerosene.

The table lists the number of housing units with each appliance and fuel for automatic controls with which to cook and heat. All figures are based on a total of all occupied housing units. The information gives answers to the questions concerning how many or what portion of the homes have food freezers and clothes dryers. Or, are the homes equipped to make use of information on electric or gas ranges or central heating?

EXAMPLES OF INTERPRETATION

Allen County

1. Sixty-eight percent of all occupied housing units had a clothes washer in 1970.

2. Fourteen percent of all occupied units had a clothes dryer in 1970.

3. Twenty-four percent of all occupiecd units had a food freezer in 1960.

4. Ninety-eight percent of all occupied units utilized fuel for automatic controls for cooking in 1970.

0099

TABLE 18. SELECTED EQUIPMENT AND FINANCIAL CHARACTERISTICS OF HOUSING UNITS, 1960 AND 1970, KENTUCKY COUNTIES

INTRODUCTION

Table 18 indicates the availability of a telephone, an automobile, an air conditioner, and a television to the occupants of the housing unit. Also listed is the median value of owner occupied units and the median rent paid in renter occupied units.

A unit is classified as having a telephone if there is a telephone available to the occupants for receiving calls. The telephone may serve the occupants of several units.

A housing unit is considered to have an automobile available if any member of the household owned or regularly used one or more passenger automobiles. Taxicabs, pickups, or larger trucks were not counted.

"Air conditioning available" indicates that a housing unit has a central air conditioning system or at least one room-size unit.

Television sets of all types, whether "color" or "black and white", were counted. The number in the table indicates the number of housing units with at least one set available. In 1970 a separate category was added to indicate those sets which can receive UHF broadcasts.

The value of the housing unit includes only figures for single-family units on less than ten acres and owner occupied. Mobile homes are also excluded. The value is the owner's estimate of how much the property (house and lot) would sell for if it were for sale.

The rental quantity entered in Table 18 is a median gross rent figure. Gross rent is the monthly rent contracted for plus the estimated average monthly cost of utilities if these items are not included in the monthly rate. Gross rent is calculated only on renter occupied units.

Information on telephone, automobile, television, value, and rent in both 1960 and 1970 was collected on all occupied housing units. In 1960 data on air conditioning was collected on all occupied units; however, in 1970 the information on air conditioners was collected on all year-round housing units (both occupied and vacant).

EXAMPLES OF INTERPRETATION

Breckinridge County

1. Sixty-nine percent of all occupied housing units had a telephone available in 1970.

2. Eighteen percent of all year-round housing units had an air conditioner in 1970.

0105

3. The median value of owner occupied houses rose from $5,000 to $8,500 from 1960 to 1970.

4. The median gross rent paid in renter occupied housing units increased from $46.00 to $61.00 per month from 1960 to 1970.
